

INFSCI 2725:

Data Analytics

(an introduction)

Philip J. Cwynar MSIS, MBA

Chirayu Wongchokprasitti PhD

**University of Pittsburgh
School of Information Sciences
and Intelligent Systems Program**

INFSCI 2725 DATA ANALYTICS

Introduction to fundamental technologies dealing with distributed **storage** and efficient **analysis** of **very large amounts of data**.

It is an **overview** of approaches for extracting **information** and **knowledge** from data, verification, testing, and presentation of results.

It is a required course in the “Big Data Analytics” Track of Study

Outline

- **GIST “Big Data Analytics” Track**
- **Introducing each other**
- **Organization of the course**
- **Some useful advice**
- **What is data analytics?**
- **Contents of the course**
- **Course outline**

Some useful advice
What is decision analysis?
Contents of the course
Course outline

GIST “Big Data Analytics” track

- The “Big Data Analytics” specialization aims at preparing SIS graduates for careers in the field of “Big Data.”
- Provide the essential in-depth knowledge of technologies relevant to big data management.
- Coursework will cover the design and maintenance of infrastructure to efficiently store, easily access, and transfer extremely large amounts of data.
- Education to design, develop and deploy complex information systems and applications that deal with multi-terabyte data sets.

- Introducing each other
- Organization of the course
- Some useful advice
- What is decision analysis?

GIST “Big Data Analytics” lead faculty

Lead faculty for the “Big Data Analytics” specialization
(listed alphabetically):

Marek J. Druzdzel (decision support, data analytics)

Hassan Karimi (Geographic Information Systems)

Prashant Krishnamurthy (telecommunications)

Vladimir Zadorozhny (databases, wireless sensor networks)

- Introducing each other
- Organization of the course
- Some useful advice
- What is decision analysis?
- Contents of the course
- Course outline

Other key GIST faculty with related interests

Rosta Farzan (social computing)

Stephen C. Hirtle (information visualization, cluster analysis, data mining)

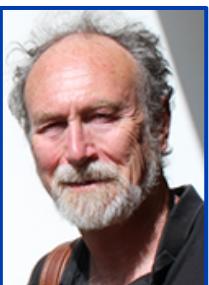

James Joshi (security)

Michael Lewis (human Factors; human-computer interaction; visualization)

Yu-Ru Lin (social and political networks, computational and visualization methods for understanding network data)

Paul Munro (neural information processing, modeling and simulation, models of learning, visualization)

Balaji Palanisamy (Distributed Systems, Location and Data Privacy, Big Data and Cloud Computing)

- Introducing each other

GIST “Big Data Analytics” prerequisites

Students must have taken **IS 2500 Data Structures** or an equivalent as well as a course in Java programming language prior to entering the “Big Data Analytics” specialization.

This is in addition to the other pre-requisites for the MSIS program (listed on <http://www.ischool.pitt.edu/ist/degrees/msis-admissions.php>), i.e., one three-credit college course in each of the following:

- **A structured programming language** (Java, Python, C# or C++)
- **Statistics** (data collection, descriptive and inferential statistics)
- **Mathematics** (discrete mathematics or calculus)

<http://www.ischool.pitt.edu/ist/degrees/specializations/big-data.php>

GIST “Big Data Analytics” plan of study

6 credits in the Mathematical and Formal Foundations area:

Required courses:

INFSCI 2160: Data Mining
INFSCI 2591: Algorithm Design

6 credits in the Cognitive Science area:

Recommended courses:

INFSCI 2410 Introduction to Neural Networks
INFSCI 2415 Information Visualization
INFSCI 2430 Social Computing
INFSCI 2480 Adaptive Information Systems
INFSCI 2130: Decision Analysis and Decision Support Systems

- Introducing each other
- Organization of the course
- Some useful advice
- What is decision analysis?
- Contents of the course
- Course outline

GIST “Big Data Analytics” plan of study

18 credits in the Systems and Technology area:

Required courses:

INFSCI 2710: Database Management
INFSCI 2711: Advanced Topics in Database Management or
INFSCI 2750 Cloud Computing
INFSCI 2725: Data Analytics

Recommended courses:

INFSCI 2150 Security and Privacy
INFSCI 2711 Advanced Topics in Database Management
INFSCI 2750 Cloud Computing
TELCOM 2120 Network Performance
TELCOM 2321 Computer Networking

- Introducing each other
- Organization of the course

GIST “Big Data Analytics” plan of study

6 credits of Electives:

Recommended courses:

INFSCI 2000 Introduction to Information Science

INFSCI 2801 Geospatial Information Systems

INFSCI 2802 Mobile GIS and Location-Based Services

INFSCI 2809 Spatial Data Analytics

The electives can be chosen to meet the individual needs of the student and may include classes in Machine Learning, Advanced Statistics, and domain-specific areas.

Introductions -- Who are you?

Tell us about yourself:

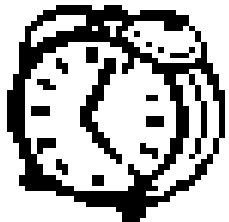

- **What is your name, what do you want to be called?**
- **What is your educational background (prior studies, current program)?**
- **What is your professional background (prior and current work experience)?**
- **What can you do? What are your strengths?**

A word of advice: Listen carefully and look for partners for your assignments and term project ☺!

Objective of the course

The primary objective of this course is to make you acquainted with analytical procedures that are useful in processing very large amounts of data. This should make you better prepared for the deluge of data that you will encounter in practical environments.

- Introducing each other
- Organization of the course
- Some useful advice
- What is data analytics?
- Contents
- Course outline

The textbook

Readings for this course will be taken from several sources, listed in the syllabus.

Additional readings may be assigned in the course of the semester.

Assignments

- Introducing each other
- Organization of the course
- Some useful advice
- What is data analytics?
- Contents
- Course outline

Nine assignments planned over the course of the semester.

**Group work (at most 3 students in each group).
Deadlines are marked on the syllabus.**

Will be “recycled” but please do not feel tempted to use past solutions!

This is bad for you and is also explicitly forbidden by the University anti-plagiarism policies.

- Introducing each other
- Organization of the course
- Some useful advice
- What is data analytics?
- Contents
- Course outline

Group work (assignments and project)

- Group work means generally learning more with a smaller effort.
- Some communication overhead but it is generally worth it.
- Make sure that the groups that you form are not like in this cartoon!
- Small groups (2-3 students).

IT'S TIME FOR A...

GROUP ASSIGNMENT!!

Didn't attend
any group
meetings

Doesn't
understand
the material

Gave the
presentation
but obviously
didn't know
what he was
even saying

Who is
this guy

"You can
use my
printer"

Did all the
research, wrote
paper, composed
presentation

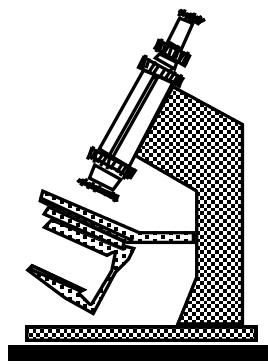

- Introducing each other
- Organization of the course
- Some useful advice
- What is data analytics?
- Contents
- Course outline

Term project

- Play with a fairly large (2GB+) data file.
- Team work (2-3 people, do not necessarily have to be the same as for the assignments).
- Develop ways of efficiently storing the data and processing it over the course of the semester.
- Important ultimate performance/accuracy but also computational efficiency.

Exams

There will be one midterm exam and one comprehensive final exam, both closed book.

You can bring with you to the exam one double-sided letter-size sheet of paper with notes.

There are no limits on the font size – you can cram as much information on these two pages as you wish – but the notes have to be handwritten personally by you and this is a strict requirement.

Copied or computer-printed sheets are not allowed.

- What is data analytics?
- Contents
- Course outline

- Introducing each other
- Organization of the course
- Some useful advice
- What is data analytics?
- Contents
- Course outline

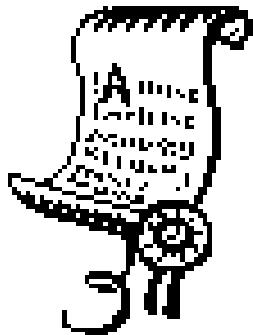

Expected effort (time load)

- Expect to spend about **six hours (preferably nine) quality time outside of class for every class meeting.**
 - Four hours (and two more) for readings
 - Two hours (and one more) to do the assignments.
- The term project should normally demand between **twenty and thirty hours** of your time.
- The actual load will vary, of course, depending on your background and preparation.

- Introducing each other
- Organization of the course
- Some useful advice
- What is data analytics?
- Contents
- Course outline

Grading

Your final grade for the course will be determined as follows:

Assignments : 30%

Term project : 30%

Midterm exam : 20%

Final exam : 20%

On the top of this all, you can obtain up to 10% of the total score for in-class quizzes and participation.

Useful Advice (Hopefully)

- Introducing each other
- Organization of the course
- Some useful advice
- What is data analytics?
- Contents
- Course outline

Do you really want to take this course?

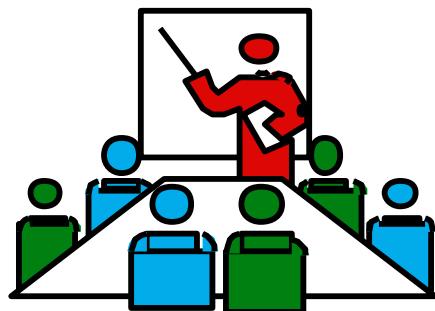

Please ask yourself the following questions:

- Do I really want to take this course?
- Is this the right time for me to take this course?
- Do I have enough time to take this course?
- Do I want to take this course with this teacher?

- Introducing each other

Come to classes ...

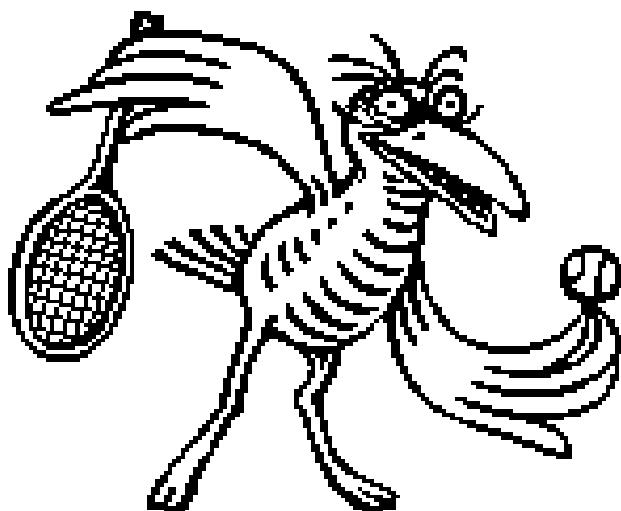

- **Class attendance is important in learning.**
- **Coming to class stimulates timely reading of the material and helps you to be up to date on what is happening in the course.**
- **Our in-class discussions and exercises will be an important factor in your learning.**
- **Understanding difficult parts of the material on your own may often cost you a multiple of what it takes in class.**

Knowledge

From wisdom to ... ?

1. **Data:** symbols
2. **Information:** data that are processed to be useful;
provides answers to "who", "what", "where", and
"when" questions
3. **Knowledge:** application of data and information;
answers "how" questions
4. **Understanding:** appreciation of "why"
5. **Wisdom:** evaluated understanding

“Wisdom does not make you a good man” – Confucius?

**“Data is not information, Information is not knowledge,
Knowledge is not understanding, Understanding is not
wisdom”**

– Cliff Stoll & Gary Schubert

“Science is organized knowledge. Wisdom is organized life.”

– Immanuel Kant

What is “Big Data?”

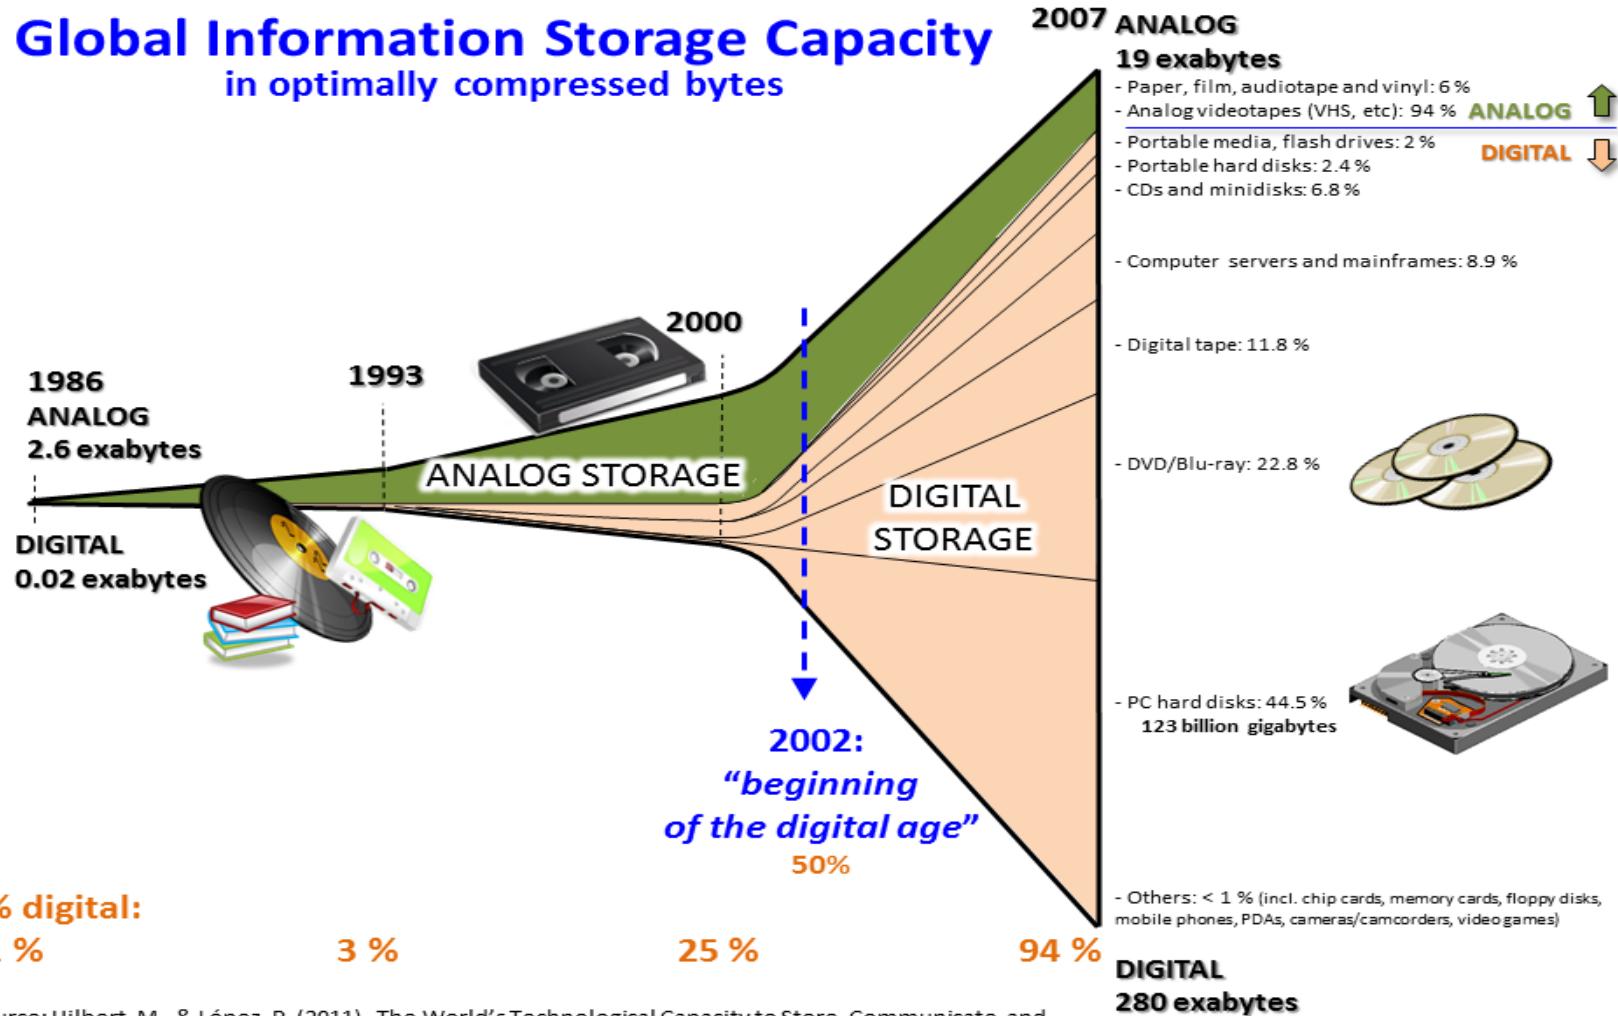

- Introducing each other
- Organization of the course
- Some useful advice
- What is data analytics?
- Contents
- Course outline

What is “Big Data”?

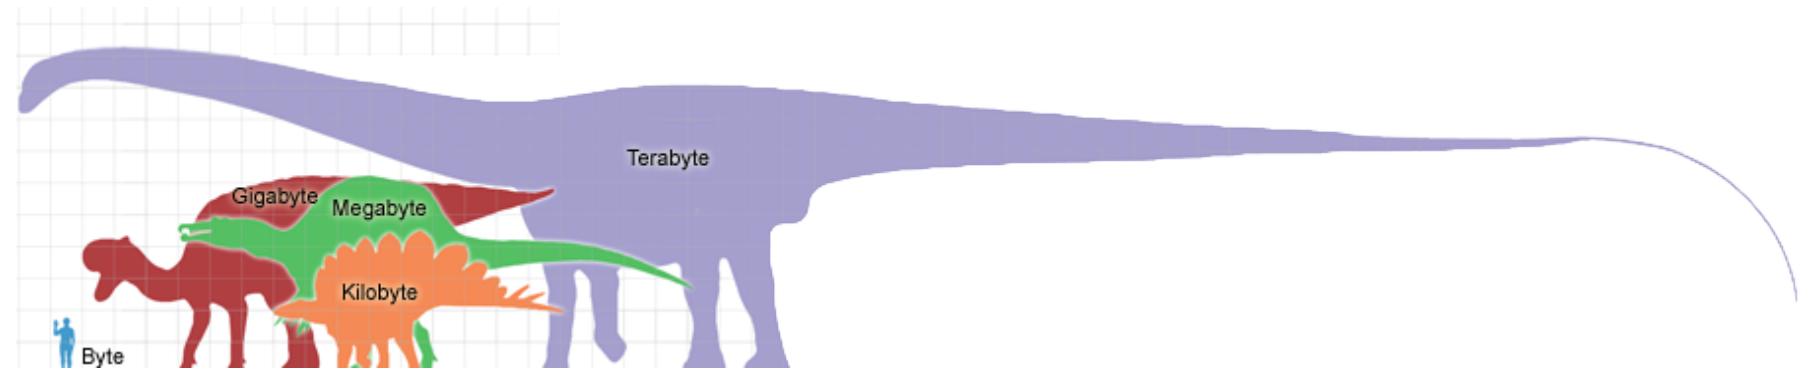

“**Big data** is a broad term for **data** sets so **LARGE** or **COMPLEX** that traditional **data** processing applications are inadequate. Challenges include analysis, capture, **data** curation, search, sharing, storage, transfer, visualization, querying and information privacy.”

http://en.wikipedia.org/wiki/Big_data

Global Information Storage Capacity in optimally compressed bytes

Source: Hilbert, M., & López, P. (2011). The World's Technological Capacity to Store, Communicate, and Compute Information. *Science*, 332(6025), 60–65. <http://www.martinhilbert.net/WorldInfoCapacity.html>

A **zettabyte** is a measure of storage capacity and is 2 to the 70th power bytes, also expressed as 10^{21} or **1 sextillion bytes**. One **zettabyte** is approximately equal to a thousand **exabytes** or a billion **terabytes**.

WHAT'S A ZETTABYTE?

1 kilobyte	1,000,000,000,000,000,000
1 megabyte	1,000,000,000,000,000,000
1 gigabyte	1,000,000,000,000,000,000
1 terabyte	1,000,000,000,000,000,000
1 petabyte	1,000,000,000,000,000,000
1 exabyte	1,000,000,000,000,000,000
1 zettabyte	1,000,000,000,000,000,000

SOURCES: CISCO

Anything Bigger???????????

How big is a **Yottabyte?**

TERABYTE

Will fit 200,000 photos or mp3 songs on a single 1 terabyte hard drive.

PETABYTE

Will fit on 16 Backblaze storage pods racked in two datacenter cabinets.

EXABYTE

Will fit in 2,000 cabinets and fill a 4 story datacenter that takes up a city block.

ZETTABYTE

Will fill 1,000 datacenters or about 20% of Manhattan, New York.

YOTTABYTE

Will fill the states of Delaware and Rhode Island with a million datacenters.

Definition: Starbucks analogy

Some examples of “Big Data”

- Walmart handles more than 1 million customer transactions every hour, estimated to contain more than 2.5 petabytes of data
 - Equivalent of 167 times the information contained in all the books in the US Library of Congress
- Facebook handles 40 billion photos from its user base.
- Four main detectors at the Large Hadron Collider (LHC) produced 13 petabytes of data in 2010 (13,000 terabytes).
- FICO Falcon Credit Card Fraud Detection System protects 2.1 billion active accounts world-wide.

“A man who does not analyze his data has no advantage over a man who has no data”

— Mar(e)k Druzdzel ☺

What is “Big Data?”

“Big data” – a personal view

“Big Data” does not seem to be more (above data analytics) than a sound use of old computer science techniques, such as distributed storage and distributed processing

These techniques are simply a necessity when the amount of data and the complexity of computing becomes too large

The term “Big Data” will disappear, although the problems of efficient storage and retrieval, analysis, and presentation of results will stay
