# **Home Depot Competition**

#### Chirayu Wongchokprasitti, PhD

**University of Pittsburgh** 

**Center for Causal Discovery** 

**Department of Biomedical Informatics** 

chw20@pitt.edu

http://www.pitt.edu/~chw20

### **Competition Detail**

- Predict the relevance of search results
- End: 11:59 pm, Monday 25 April 2016 UTC (98 days left)
- Evaluation: Root Mean Squared Error (RMSE)
- Data: Train, Test, Product Descriptions,
  Attribute

https://www.kaggle.com/dsoreo/home-depotproduct-search-relevance/testing-r/notebook

### **Preparing Data**

- Cleanup Data
  - Lower Case
  - Remove Special Characters (Remove White Space/Tab)
  - Remove Stop Words (Too Common Words/Terms)
  - Correct misspelled words (aircondition -> air condition)
- Stem Data (Disambiguating different forms of the same word)
  - Porter Stemmer
  - Snowball Stemmer
- Normalize Data
  - TF/IDF
  - Z score  $(x \mu)/\sigma$
- Feature Manipulation (Beyond Bag of Words)
  - Feature Expansion (N-Grams)
  - Feature Transformation (SVD)
  - Feature Selection (Forward Selection/Backward Elimination/PCA)

### Correcting Misspelled Words

- Naiive Bayes
  - Filter the good word outs (Lookup a dictionary <u>http://services.aonaware.com/DictService/</u> or <u>https://www.wordsapi.com/</u>)
  - Lookup Google N-Grams as reference (Find Frequency of any term)
    <a href="http://storage.googleapis.com/books/ngrams/books/datasetsv2.html">http://storage.googleapis.com/books/ngrams/books/datasetsv2.html</a>
  - Generate all possible combination terms
  - Pick highest prob. one
  - Ex: P(air)\*P(condition) > P(a)\*P(ir)\*P(con)\*P(dit)\*P(ion)
- Lean on Google Search (Search Suggestion)
   <a href="https://www.kaggle.com/steubk/home-depot-product-search-relevance/fixing-typos/discussion">https://www.kaggle.com/steubk/home-depot-product-search-relevance/fixing-typos/discussion</a>
  - (And it doesn't break a competition's rule ☺)
- <a href="http://hunspell.github.io/">http://hunspell.github.io/</a> (Comply the rule ☺)

# Bag of Words (Unigram)

id	q_1	q_m	title_1	title_n	p_1	p_o	a_1	а_р
1	1	0	1	0	0	0	0	0
2	0	0	0	1	0	0	0	0
3	0	0	0	0	0	1	0	0
4	0	1	0	0	5	0	0	0
5	0	0	0	1	0	0	0	0
6	1	0	0	0	0	0	0	0
7	0	0	0	0	0	3	0	0
N								

- Still need to normalize the values

### **N-Grams**

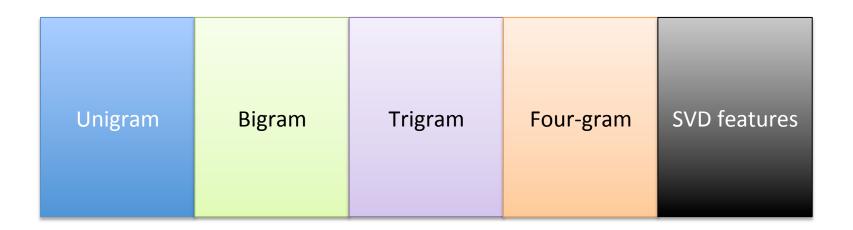

- A contiguous sequence of n items from a given sequence of text or speech
- The items can be phonemes, syllables, letters, words or base pairs

### Feature Transformation

- Singular Value Decomposition
  - $-M = U\Sigma V^{T}$
  - U is the interaction matrix btw features
  - V is the interaction matrix btw products
- Word2vec (i.e. king man + woman = queen)
  <a href="http://deeplearning4j.org/word2vec">http://deeplearning4j.org/word2vec</a>
- Lda2vec <a href="https://github.com/cemoody/lda2vec">https://github.com/cemoody/lda2vec</a>
  and

http://www.slideshare.net/ChristopherMoody3/word2vec-lda-and-introducing-a-new-hybrid-algorithm-lda2vec-57135994

### Feature Space

### Example

#### Python

- Random Forest (score w/o stemming: 0.49739)
  <a href="https://www.kaggle.com/wenxuanchen/home-depot-product-search-relevance/sklearn-random-forest">https://www.kaggle.com/wenxuanchen/home-depot-product-search-relevance/sklearn-random-forest</a>
- Random Forest (score w Snowball stemming: 0.48721)
  <a href="https://www.kaggle.com/junfeng/home-depot-product-search-relevance/sklearn-random-forest-merge-attributes/log">https://www.kaggle.com/junfeng/home-depot-product-search-relevance/sklearn-random-forest-merge-attributes/log</a>

#### • R

(Linear Regression)
